

CHARTER TOWNSHIP OF LARKIN
Water Connection Policy
(Effective March 14, 2018)

Parcels which have been specially assessed for water may receive connections, provided the connections are within the total number authorized by the Water Agreement.

No more than a total of 10 connections may be issued for connection to developer installed water mains existing on March 13, 2018 in existing developments. The total of 10 is for all existing developments combined, not 10 per development.

The total number of connections authorized by the Water Agreement, as of February 26, 2018 is 212. In no event shall the number of permits issued after February 26, 2018 exceed 212, whether issued to assessed parcels or connections in existing developments.

Administrative steps:

1. Each new water connection requires a permit issued by the Township, through its Supervisor or Clerk.
2. Prior to issuance of a connection permit by the City, the applicant must present to the City the permit issued by the Township.
3. Prior to issuance of a permit by the Township, its Supervisor or Clerk shall confirm the status of the applicant parcel as to whether it has been assessed for water or is within an existing development with existing water mains installed by the developer.
4. If property is in an existing development, the applicant must provide the Township with a valid issued building permit for construction on the parcel.
5. The Township shall maintain a record of approvals provided and keep a continuing count of those issued against the number of connections then authorized by the Water Agreement.
6. If issuance of a permit by the Township exceeds the number of connections allowed in a section under the Water Agreement, approval requires additional approval of Township attorney.

By direction of the Township Board

Maria Sandow
Supervisor
